

Honors Geometry

Summer Review Packet

It is tradition at Pope HS to provide rising math students with a summer review guide of concepts and standards considered prerequisite skills for their upcoming class. This review guide represents the skills we expect our Honors Geometry students to have mastered before taking Honors Geometry. Mastery of these skills is necessary for success in our course.

Students, please use these questions as a review to help you identify the areas where you may need some extra practice. In the first week of the school year, you will take a prerequisite skills quiz. This quiz will identify the areas you will need to review to be successful in Honors Geometry and it comes directly from the material covered in the review guide.

It is expected the entire review guide be completed before the beginning of Fall Semester. Show all work, check answers (at the end of the document), make corrections and study any concepts you do not feel you have mastered. This will ensure you are prepared for the Prerequisite Skills Quiz** and the course.

Looking forward to meeting you!

Mrs. Stephanie White
